

Flexible spray-mopping for perfect results

Key features

- Minimal instruction and tool preparation time
- Pressurised solution dispensing system
- Colour-coded solution bottles
- Low, balanced floor tool weight

Benefits

- Time savings
- Efficient chemical use
- Hygiene security
- Ergonomic working

The innovative yet ingeniously simple TASKI Versa Plus 2.0 System consists of four key elements: a unique mop handle with integrated solution dispensing system, a mop frame, a colour-coded solution bottle and an application specific mop.

The mopping solution, which is stored in the manually pressurised solution bottle directly on the tool's handle, is distributed via the spray nozzle in front of the mop. Solution quantity is controlled by pushing the dispensing button on top of the handle.

The TASKI Versa Plus 2.0 spray-mopping system is very flexible, the frame is compatible with a range of washable and disposable flat mops. The tool comes standard with an orange bottle. In addition there are 2 coloured bottles to choose from, red & blue.

Usage

TASKI spray-mopping system is recommended for damp mopping, 1-step mopping and disinfection of small and medium-sized areas. Most suited for quick floor cleaning of high traffic areas.

Flexible spray-mopping for perfect results

Directions for use

Fill the solution bottle with clean water and the required amount of chemical product, screw on the lid, insert the bottle into the holder and lock clock wise into position. Depress the bottle lid's plunger 4 times to pressurise the bottle. Place the required mop on the floor and lower the floor tool onto the mop. Press the dispensing button at the top of the floor tool's handle to supply cleaning/ disinfectant solution onto the mop as required by the specific application and soiling level.

Please note

- After use, pull the red pressure release valve and empty the solution bottle
- To remove the mop pull the mop's tab
- TASKI VersaPlus 2.0 is delivered with 0.6L orange bottle as standard

Technical data			
Material tool	Polypropylène (PP)	Handle length	1500 mm
Material handle	Aluminium	Bottle pressure	maximum 2,2 bar
Width	VersaPlus 40 : 400 mm	Weight	VersaPlus 40 / 820 g
Performance	80 m ² per bottle		

The above data is typical of normal production and should not be taken as a specification.
