

THE WORLD'S SMARTEST SANITARY DISPOSAL UNIT

SAFE & SUSTAINABLE

Terracyclic's unique Sanitary Waste Disposal Unit, has a totally disposable 'lid and liner' cartridge system, that means; no cleaning, less waste, cost savings and an overall reduction of energy use.

FEATURES & BENEFITS

- **Simple Design** - Easy to install & easy to refill.
- **Minimal Contact** - Sealed bag with modesty flap means waste is never to be seen again, reducing the risk to harmful bacteria for users and cleaning staff.
- **Environmentally Safe** - Non-toxic, biodegradable, odourised plastics, breaks down in 1 - 5 years.
- **Small Dispenser Footprint** - The cylinders are wall-mountable or freestanding and will fit into almost every washroom.

SIMPLE

The Bio Bin is a wall-mounted or free standing cylindrical unit that is ideal for tight spaces. The self-deodorising cartridges seal in sanitary waste and are quick and easy to replace. It removes the need for any complicated cleaning and requires minimal storage space.

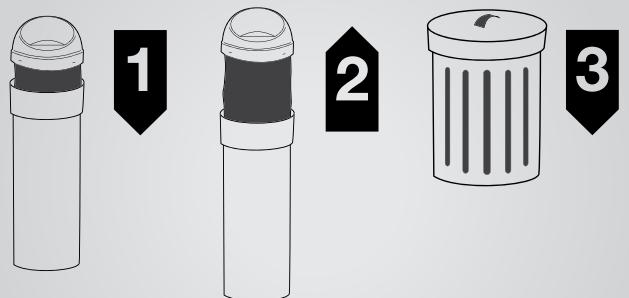

GREEN

The Bio Bin cartridge consists of a disposable cap, modesty flap and liner that are completely non-toxic and degradable. Because of the innovative design, environmental impact and degradability, the TerraCyclic Bio Bin has been awarded a Carbon Footprint Accreditation.

SAFE

The design of the Bio Bin cartridges contains all waste products so that users and cleaning staff have no contact with unsanitary waste. And without the need for an external cleaning service, maintenance is easily monitored and cartridges are refilled before any mess can occur.

REFILLING THE TERRACYCLIC BIO BIN IS AS SIMPLE AS 1, 2, 3!

1. Insert a new cartridge into Cylinder Base.
2. Remove the cartridge when full.
3. Place the cartridge in any general rubbish receptacle.

The feminine hygiene disposal market is primarily based on rental services and cleaning maintenance. Most companies in this market only provide a sanitary disposal service that requires an incredible amount of energy consumption with every service due to the servicer's travel, water waste in cleaning out sanitary bins and the chemicals used in the cleaning process.

TerraCyclic removes this excessive use of energy in its progressive system that eliminates the need for an external business. Each refill cartridge is degradable and completely self-contained, meaning that once an item has been deposited, there is no chance of it coming into contact with another person.

The Bio Bin is perfect for the smallest spaces as well as the busiest sites.

ACCESSORIES

Base Plinth

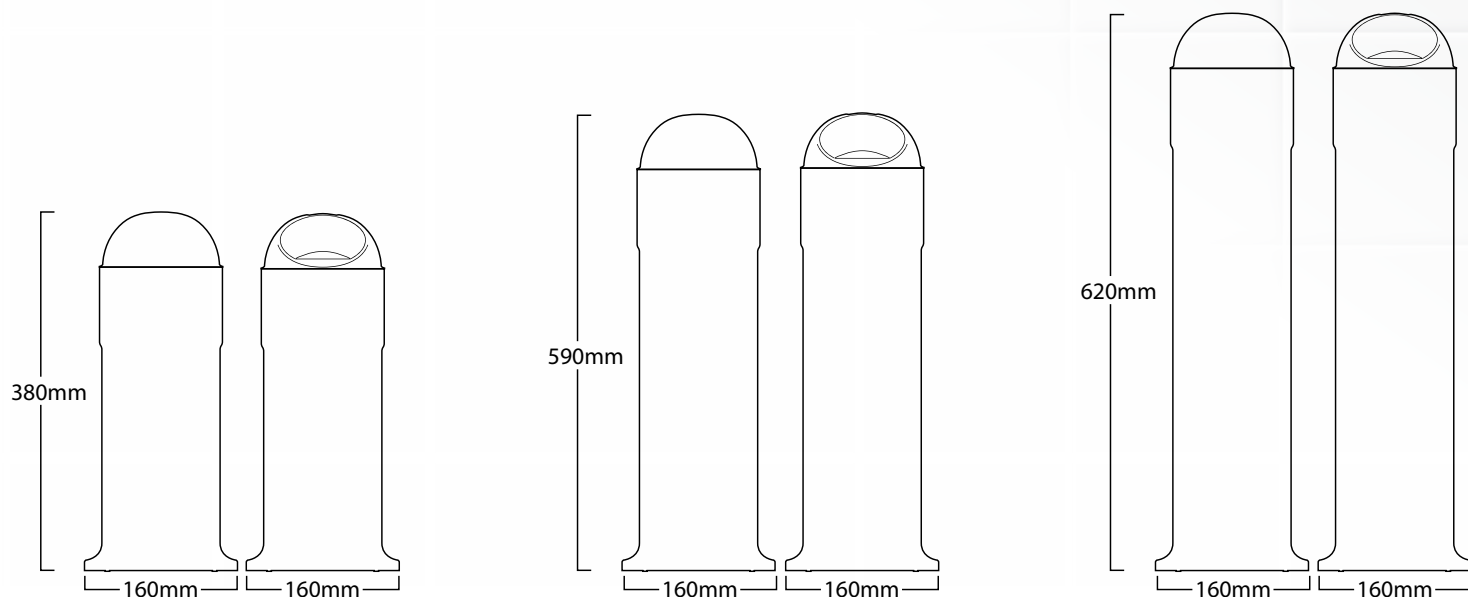

- Retrofits to the existing base
- Stabilises the Bio-bin for freestanding installation

Auto Sensor

- Takes D cell batteries
- Lasts approximately a year or 30,000 - 50,000 cycles.

Foot Pedal

- Attaches to the base plinth (sold separately)
- Converts the manual Bio-bin to be hands-free
- Suitable for freestanding installation
